

Supplemental table 4. Attendance rate of nationwide health screening program according to male by economic status in 2003–2004

Variable	Attendance in 2003 or 2004 screening		OR (95% CI)*	Adjusted OR† (95% CI)*
	Non-attendees (n=94,400)	Attendees (n=57,102)		
Economic status				
1 (Lowest)	12,884 (45.66)	6,359 (41.80)	1.05 (1.01–1.09)	1.07 (1.03–1.12)
2	15,554 (49.17)	6,550 (46.55)	0.89 (0.86–0.93)	0.90 (0.87–0.94)
3	18,872 (49.42)	8,897 (55.03)	1	1
4	21,532 (47.29)	13,230 (59.31)	1.30 (1.26–1.35)	1.30 (1.26–1.35)
5 (Highest)	25,558 (44.02)	22,066 (59.92)	1.83 (1.78–1.89)	1.83 (1.77–1.88)

Values are presented as number (%).

OR, odds ratio; CI, confidence interval.

*By logistic regression for categorical variable. †Adjusted for age, Charlson comorbidity index, and disability.
